As a Full Stack Developer, I have extensive experience in building robust and scalable web applications using Laravel and React.js. On the backend, I leverage Laravel's powerful features and Object-Oriented Programming (OOP) principles to design and implement efficient database architectures, write comprehensive tests, and ensure code quality. For the frontend, I utilize React.js, Vite, and Tailwind CSS to create dynamic and responsive user interfaces. My projects are containerized using Docker and orchestrated with Docker Compose, ensuring consistent development and deployment.
